

# LITO ZARATE BIALA

## HANDS-ON AI BUILDER & ENTERPRISE AI PRODUCT LEAD | LLM EVALUATION FRAMEWORKS · AGENTS · RAG · MCP · SRE RELIABILITY

Minneapolis–St. Paul, MN · lzbiala@gmail.com · linkedin.com/in/lzbiala · github.com/LZBiala · lzbiala.github.io

### SUMMARY

---

Hands-on AI builder and enterprise AI product lead at Wells Fargo: I ship governed GenAI products end to end — problem framing, workflow design, hands-on implementation, evaluation suites, and stakeholder adoption — backed by 12+ years of leadership across people management and technical delivery. Reliability-first AI grounded in human review, evidence provenance, observability, and enterprise risk. Public, CI-verified evaluation portfolio at [github.com/LZBiala](https://github.com/LZBiala) — the build fails if a published claim drifts.

### AI LEADERSHIP & TECHNICAL STRENGTHS

---

- **AI Product & Strategy:** use-case discovery, roadmap sequencing, requirements, acceptance criteria, adoption, stakeholder alignment.
- **GenAI & Agentic Systems:** RAG, LLM evaluation frameworks and evals, prompt/context engineering, MCP integration, agents, human-in-the-loop controls.
- **AI Engineering Delivery:** Python, Streamlit, TypeScript, GitHub, CI/CD, automated tests, code review, iterative PR-based delivery.
- **Reliability & Governance:** SRE, incident management, 5-Why/RCA, MTTx, observability, fail-closed behavior, AI risk and compliance readiness.
- **Agentic Build Tooling:** Claude Code, Codex, Devin — daily hands-on agentic system delivery with human-in-the-loop controls.

### PROFESSIONAL EXPERIENCE

---

#### Vice President, Lead Digital Product Service Manager | Wells Fargo, Digital Technology & Innovation

Individual-contributor leadership role · Minneapolis, MN | Feb 2025 – Present

- **AI product delivery:** lead delivery of two governed AI products — an incident-notification quality assistant and a Daily 5-Why QA platform — turning operational pain points into buildable specs: requirements, evidence-source rules, versioned scoring rubrics, and acceptance tests, all gated by human review.
- **Hands-on build:** daily engineering with GitHub, Jira, Devin, VS Code Copilot, Python, Streamlit, and TypeScript — focused branches, pull requests, automated tests, coverage, linting, type checks, and protected-file audits for reviewable change.
- **Evidence architecture:** designed the evidence architecture pulling live incident and RCA data from ServiceNow and SharePoint: every record carries its provenance and passes schema validation; the system redacts diagnostics, fails closed on bad data, and requires explicit approval gates before touching production.
- **Responsible-AI boundaries:** established product boundaries that removed person-level scoring and identity from published score-bearing outputs — keeping names only for routing work to the right team and supporting 24-hour handoffs across global time zones.
- **Incident leadership:** lead major-incident, vulnerability-remediation, and operating-review readiness across distributed stakeholders; translate technical evidence into decision-ready impact, root-cause, detection-gap, mitigation, and preventive-action narratives.
- **AI enablement:** advance AI adoption through executive communication, pair programming, prompt-engineering enablement, technical documentation, and coaching on responsible human-in-the-loop delivery.

#### Senior Assistant Vice President, Digital Product Service Manager | Wells Fargo

Minneapolis, MN | Oct 2022 – Feb 2025

- **Reliability:** improved resiliency and uptime for customer-critical applications; reduced incident response times (MTTx) through proactive engineering and 5-why root-cause discipline.
- **Observability:** enhanced log-based alerting and monitoring through platform migrations (Splunk, Grafana), preserving operational continuity with executive-level service-health insight.
- **Platform delivery:** engineered foundational platforms for scale through cloud migration and data-center exit; led engineering release meetings across AppDev, Platform, and Product teams via CI/CD; guided distributed US/India engineering teams.

## Senior Technology Business Systems Consultant (contract) | Wells Fargo

Jan 2022 – Oct 2023

- Kept digital information systems running smoothly under SRE, ITIL, and ITSM best practices; supported incident and problem management for production applications.

## Software Product Analyst (contract)

Mar 2021 – Jan 2022

- Monitored health and status of internal APIs through dashboards and data solutions; analyzed historical trends to surface persistent performance issues.

Earlier people-leadership and operations roles — full history on LinkedIn.

## SELECTED ENTERPRISE AI INITIATIVES (2026)

---

### PSM (Product Service Management) Notification Quality Assistant

Product lead & hands-on delivery lead

- Built and governed a Python/Streamlit MVP for incident-notification completeness and 5-Why readiness, with a controlled roadmap from demonstration data toward approved live SharePoint MCP ingestion.
- Implemented provider seams, source-routing and evidence-fidelity controls, safe display-layer diagnostics, and explicit human review; prohibited fabricated evidence, autonomous communication, and unapproved write operations.

### Incident Quality Assurance Platform

Daily 5-Why QA product lane

- Defined phased delivery: a build plan mapping features to phases, version-controlled scoring rubrics, rules requiring every root-cause claim to cite its source evidence, quality checks on preventive actions, and acceptance testing — outputs flagged as advisory pending human review.
- Encoded evidence-aware states so incomplete or non-evaluable content is never misrepresented as passing or failing, improving trust and auditability.

### AI Enablement & Architecture Intelligence

Enterprise learning & solution design

- Created reusable prompt-engineering guidance and supported team AI learning; explored enterprise RAG, chunking, metadata enrichment, versioning, and quality checks for architecture-intelligence use cases.

## PUBLIC AI EVALUATION & RELIABILITY PORTFOLIO — [GITHUB.COM/LZBIALA](https://github.com/lzbiala) · [LZBIALA.GITHUB.IO](https://lzbiala.github.io)

---

- wiki-memory-lab**: agent-memory evaluation framework; selective recall at 0.61× the tokens of the full-context baseline, with the loss trade-off (1.27×) measured and published rather than hidden.
- agent-mutation-lab**: behavioral defect-detection harness; caught 9/10 planted defects with 0 false alarms on byte-identical clean controls.
- adversarial-chambers**: adversarial robustness evals; instruction-flip test — an evidence-driven judge flips 0/8 verdicts, a deferential judge flips 3/8, exactly the ambiguous items.
- memory-repair-lab**: placebo-controlled self-repair evaluation; 8/10 → 10/10 on a held-out split sealed before generation zero.

All four are CI-verified on Windows and Linux: the build fails if any published claim drifts from regenerated data. Each ships an interactive walkthrough a non-engineer can click through.

## TECHNOLOGY

---

**AI/ML**: Generative AI, RAG, agentic automation, LLM evaluation frameworks, prompt optimization, responsible AI · **Engineering**: Python, Streamlit, TypeScript, Git, GitHub, APIs, CI/CD, automated testing · **Operations**: Splunk, Grafana, observability, incident/problem management, 5-Why RCA, MTTx, ITIL · **Leadership**: AI product strategy, distributed-team leadership, technical writing, executive communication, risk and compliance · **Agentic tooling**: Claude Code, Codex, Devin (Cognition)

## EDUCATION & CREDENTIALS

---

Data Analytics & Data Visualization Boot Camp Certificate, University of Minnesota Twin Cities · B.A. Psychology, Metropolitan State University

Splunk certified (Fundamentals 1–3, Cloud Observability) · Wells Fargo internal SRE-leadership and AI-engineering program pathways
